DC-HVDC converter

The C Series is a line of miniature, regulated DC to high voltage DC converters. Each model is programmed from 0 to 100% of rated output via a 0 to +5 volt, DAC-compatible, high-impedance programming input voltage. An externally accessible potentiometer provides adjustable gain trim, allowing for individual calibration of units.

These converters exhibit very low ripple, noise, and EMI/RFI by utilizing a quasi-sinewave oscillator, shielded transformer, excellent filtering techniques and an isolated steel enclosure featuring a separate grounding pin. A proprietary encapsulation process and a custom UL 94-0 listed, high-performance formula are used to achieve excellent high voltage and thermal properties. Temperature drift is typically less than 50ppm/°C.

Application notes

1. Diode provides reverse polarity protection.
2. Capacitor reduces ripple.
3. Resettable fuse (Raychem P/N RXE020,025 or 030) provides indefinite short circuit protection. *Selection depends on model used, load characteristics and operating temperature range.*
4. Series resistance increases arc protection and reduces ripple (when used with an output capacitor).
5. Capacitor reduces ripple.
6. IMPORTANT: Keep Input, Programming and Output return paths separate to eliminate ground loop accuracy errors.
7. Conformal coating recommended on all exposed high voltage conductors.
8. Diode provides protection against negative programming voltage or negative transient spike.
9. Output circuit return to HV return (pin 4) on C50 - C80. On C01-C40, output circuit return to ground (pin 2).

Product description

These adapters provide convenient prototyping and evaluation during system development and integration. They allow C Series modules to be mounted to a chassis instead of designed into a PC board. Extra filtering on the input and output improves performance. A schottky diode on the input provides reverse polarity protection. Input connector is via a 15P SUB MIN-D plug (mate supplied) and output is via an SHV style coaxial connector (mate supplied).Please note when ordering a CM3 the C Series is not included and must be ordered separately.

Programming instructions

Onboard Potentiometer: connect pins 7 to 4 and 8 to 3, turn potentiometer to adjust high voltage.

Or Remote Potentiometer: connect wiper arm to pin 3, other sides to pins 4 and 2.

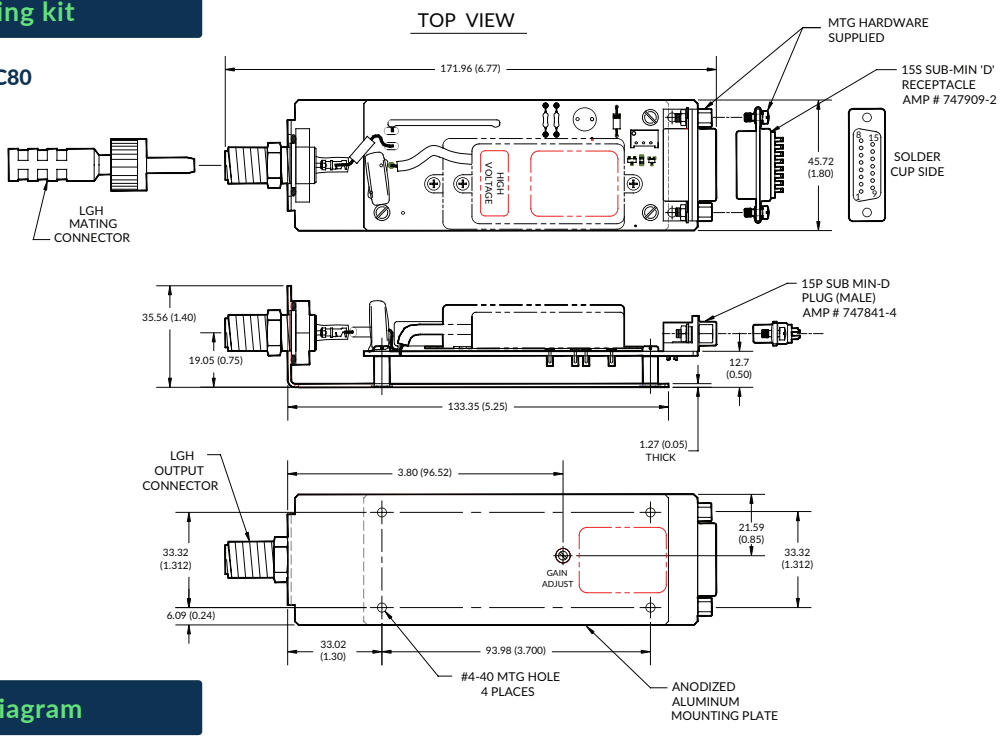

Or Remote Analog Signal: apply programming voltage to pin 3, return to pin 2.
